Gross price DE: 65.45 EUR

AlertControl Pro

Monitor, group and acknowledge faults with clear status text.

GIRA X1

AlertControl Pro

AlertControl Pro monitors fault values, missing telegrams and a lack of value changes. Separate delays can be set for fault and recovery. Individual events can feed grouped messages, appear in the visualisation with state and clear text, and be acknowledged or forwarded. The message state is also considered after a restart.

In practice

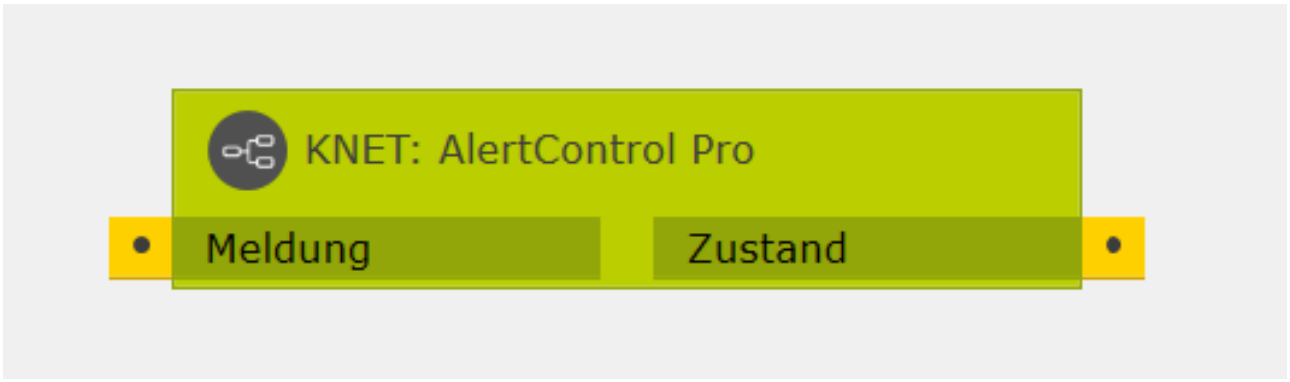

A ventilation system stops sending its cyclic status while a filter change is due. AlertControl Pro monitors both conditions and presents them in a clear grouped alert.

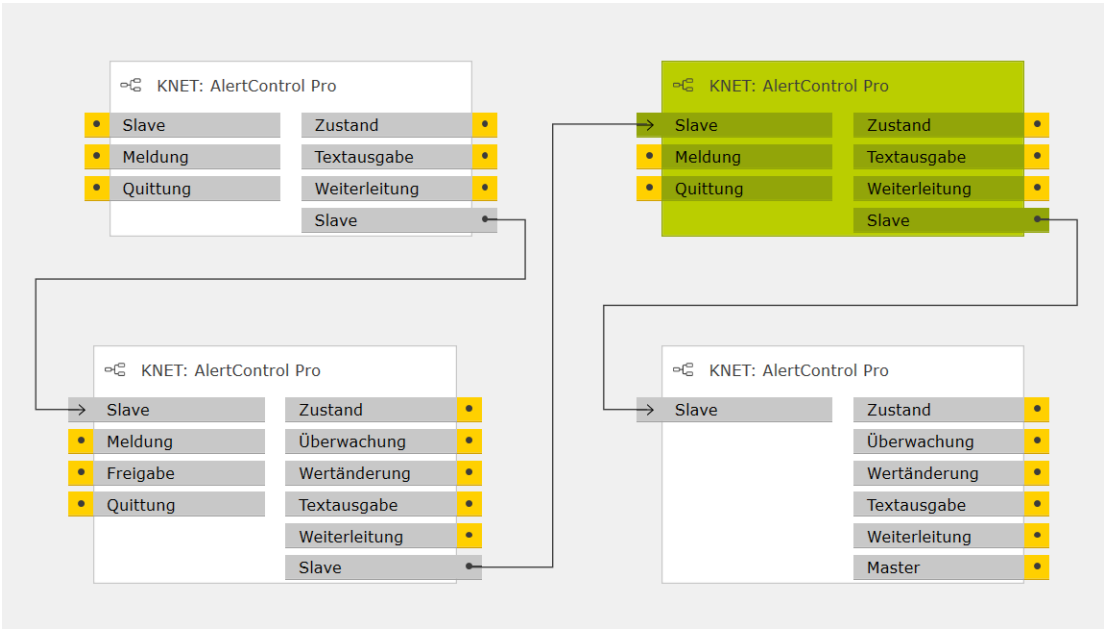

Features

- Monitor values, telegrams and value changes
- Configure separate fault and recovery delays
- Build individual and grouped messages with clear text
- Control acknowledgement and forwarding

Requires a Gira X1 and a suitable GPA version. The exact package and licence version will be checked before release.
