LOGIC DEVELOPMENT SINCE 2014

Gross price DE: 63.80 EUR

Shading Pro

Weather- and sun-based shading that respects manual control.

GIRA X1

Shading Pro

Shading Pro controls shutters, blinds and awnings according to weather and sun position, including slat tracking for blinds. Manual changes, sleep and absence modes, and a wind alarm can affect the automation. On release or restart, the logic considers existing positions and blocks instead of moving the shade without checking its state.

In practice

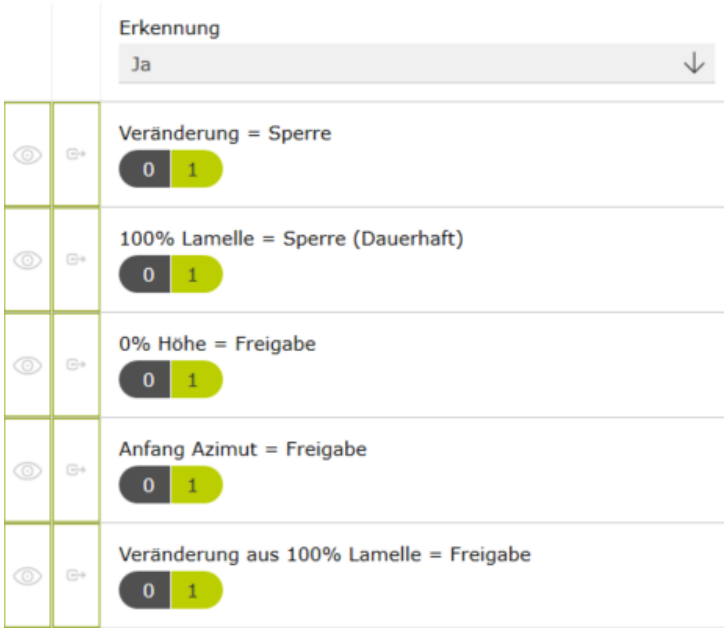

Meeting-room blinds follow the sun. A manual adjustment pauses automation; after a wind alarm or restart, the logic takes the existing position into account.

Features

- Use weather and sun position for shading
- Track sun elevation with venetian-blind slats
- Account for manual adjustments and sleep mode
- Handle absence, wind alarms and restarts deliberately

Requires a Gira X1 and a suitable GPA version. The exact package and licence version will be checked before release.
